

Client: Polimeri Europa
Project: Graduate Engineering Site Experience

Background

Polimeri is a petrochemical company wholly owned and controlled by Eni SpA. It manages the production and marketing of a wide portfolio of petrochemical products and uses a range of proprietary technologies and state-of-the-art production systems along with a wide-reaching and efficient distribution network.

Requirement

Polimeri requested a graduate engineer to be seconded to at its Southampton site to undertake minor projects on several high hazard plants.

Our Response

HFL provided Polimeri with a full-time on site chemical engineer to assist the team in the Projects Department.

This ongoing support work includes carrying out work studies from concept to completion, undertaking actions resulting from HAZOPs and the resolution of technical issues. Also included is planning, coordinating and interfacing with the production facilities personnel.

Result

Polimeri were able to utilise the HFL engineers design capabilities to complement its own engineers' production expertise.

This was of joint benefit providing valuable 'hands on' production experience to compliment the already established design capabilities of the engineer.

“It was great to see the projects being undertaken with a design perspective and I’m sure we also provided some really useful practical, site engineering experience”

Production Engineering Manager
Polimeri Europa

“ This relationship, which started as a short term appointment has been beneficial to both parties and is continuing to develop.
